color image reproduction method has been used in laser image reading systems. Now a new multi-color laser image reading system, which achieves an equivalent high performance to false color by white-light image reading is in the spotlight. Epson Pm245 in Detail This is a multi-color laser image reading system. It is a replacement for PM245. The software provides a function for multi-color image reading. In this multi-color image reading system, the sample reading speed is over 50 pages per minute. In addition, the calibration function, the imaging environment correction function, and the high-speed auto-focusing function are provided. Main Features 1) High sample reading speed 50 ppm; The sample reading speed of PM245 is 20 ppm. PM245 realizes high speed color image reading by white-light image reading and is an excellent replacement for PM245. 2) Color information: a white-light LED emits light from the light source and is reflected by the original document to form an image, and is then divided into red, green, and blue by the 3-CCD sensor. The color information of the image is obtained through binarization and can be displayed. 3) Imaging environment correction function: When the image reading operation is performed in a dark room, the reading environment may be too dark. In addition, the image quality may be affected by the influence of the lighting condition when the image reading operation is performed outdoors or in a brightly lit room. The imaging environment correction function solves these problems. In a dark environment, the original document is illuminated with white-light from the light source to obtain a clear image of the original document. In a brightly lit room, the original document is read by a multiband (or color) array sensor and the illumination is controlled to obtain an image with a high image quality. 4) High-speed auto-focusing function: This function is used to improve the read quality of the image when the image reading operation is performed at a high speed. The focus position is automatically determined. In addition, the focus position is automatically determined without the influence of the reading speed. 5) User interface is changed: The original PM245 has a color LCD screen and a CRT monitor. However, with the change of the user interface, the LED display panel is removed from PM245. 6) Separate paper feeding unit: The paper feeding unit is separated from the scanner body. In addition, the paper feeding unit can be automatically detached and mounted to the scanner body. 7) Fan: Since the light source of the scanning mechanism is a white-light LED, the cooling performance of the scanning mechanism may deteriorate due to the heat caused by the light source. PM245 adopts a fan in the scanning mechanism to solve this problem. 8) Dustproof function: Since PM245 is a portable apparatus, dust may easily adhere to the components.

A place to call home Millions of people in the world live in some of the most dangerous areas of the planet. From gun-toting gangs on the streets, to mass hangings behind high walls, to being held as prisoners in their own homes, millions of people are forced to live in the most dangerous conditions imaginable. We all have to learn to live in this world. People who get out of these situations and find a place to live, often find it hard to adjust to the changes in their lives. For a period of time they are at risk of falling back into a previous state of living. No matter what brings you to the Philippines, no matter how long you stay, you must learn to live here. Not all Filipinos are like that, but most are. When we looked for a place to call home, our goal was simple - we were trying to find a place in which we felt comfortable. We wanted to find a place where we were free to live our lives. We wanted to find a place that was not only safe but where we could live freely and with dignity. For the many Filipinos who have been unjustly imprisoned, whose homes were destroyed by landslides, whose family members were killed by criminals who took their loved ones away or whose families were kidnapped for ransom, it has been hard to find the peace of mind we wanted to find. Shelters and homes should not be the only places people can call home. We all should be free to find peace of mind. Even if we cannot be in a place that gives us peace of mind, we should still be able to find some place where we can live in dignity. In our own homes, in our neighborhoods, in our parishes. While it is not possible to return home, we can still find our homes. Filipinos are very conscious of the need to be free to live a dignified life. Our laws recognize the need to protect individuals from a host of calamities. We have laws that protect citizens against unfair treatment, we have laws that protect workers from bosses who would mistreat them, and we have laws that protect people who are vulnerable to disaster or war from harm. At the same time, our society has
